

Thank you for Conserving Our Water!

Atascadero Mutual Water Company customers have gone above and beyond the AMWC Board of Directors request of 20% and the State of California mandated reduction of 28%.

Since Governor Brown mandated a 28% reduction in April 2015 AMWC customers have exceeded the reduction requested by AMWC and mandated by the State. Customers have saved over 376 million gallons since April 2015. Average residential water use decreased from 14,000 gallons per month in July 2013 to 9,000 gallons per month in July 2015. Thank you for all your efforts!

Nacimiento Water Makes a Difference

Despite the historic statewide drought, prudent management of our groundwater resources use of water from the Nacimiento Water Project (NWP) has resulted in increasing water levels in AMWC's wells. The influence of recharging the aquifer with water from the NWP can clearly be seen in the chart below. There were no deliveries of water to AMWC from the NWP in 2014.

AMWC's NWP recharge pond at capacity.
